Source Code Clippy IntelliJ Recommender Plugin Investigation
Level 4 Individual Project, 2015/2016
Boris Nikolov

The aim of this experiment is to investigate the usability of the Source Code Clippy IntelliJ plugin. We cannot tell how good the plugin is unless we ask those people who are likely to be using them, which is why we need to run experiments like these. I will give you some time to use the plugin, before asking you to answer some questions (see questionnaire). The answers will be recorded. Please ask questions if you need to and give feedback if you wish to. Please remember that it is the system, not you, that is being evaluated. You are welcome to withdraw from the experiment at any time. Do you agree to take part in this evaluation? Do you have any questions before we start?
