Participant Consent Form: Source Code Clippy IntelliJ Recommender Plugin

SCClippy is part of an experiment to investigate the efficacy of code snippet recommendations for micro programming tasks.

The aim of this experiment is to evaluate the usability of the Source Code Clippy plugin.

The experiment will take time defined by the participant – feedback is provided when they are ready to do so.

At the start of the experiment, the participant should click the 'Info' tab provided by the plugin which will introduce them how the plugin works. After that, the user is free to use whichever functionalities.

Finally, the participant can give feedback by filling a questionnaire.

All results will be held in confidence, ensuring the privacy of all participants.

Only the answers to the questionnaire will be stored. The data will be stored on a password protected machine.

A feedback email message containing analyzed data will be sent to participants who make such request by email.

Your participation in this experiment will have no effect on your marks for any subject at this, or any other university.

Please note that it is the diagrams, not you, that are being evaluated. You may withdraw from the experiment at any time without prejudice, and any data already recorded will be discarded.

If you have any further questions regarding this experiment, please contact:

Boris Nikolov
